

Machine Setup Guide — REST Assured API Automation Workshop

Welcome! Before the session, please set up the following tools on your machine so you can follow along with the hands-on demo.

1. Java Development Kit (JDK) 11

The project is compiled with **Java 11**. We recommend installing **JDK 11** (LTS).

Installation

OS	Instructions
Windows	Download the installer from https://adoptium.net/temurin/releases/?version=11 and run it. Make sure the installer sets <code>JAVA_HOME</code> for you.
macOS	<code>brew install --cask temurin</code> (requires Homebrew)
Linux (Debian/Ubuntu)	<code>sudo apt update && sudo apt install openjdk-11-jdk</code>

Verify

Open a terminal and run:

```
java -version
```

You should see version **11**.

2. Apache Maven 3.9+

Maven is the build tool used to compile the project, manage dependencies, and run tests.

Installation

OS	Instructions
Windows	Download the binary zip from https://maven.apache.org/download.cgi . Extract it and add the <code>bin</code> folder to your system <code>PATH</code> .
macOS	<code>brew install maven</code>
Linux (Debian/Ubuntu)	<code>sudo apt install maven</code>

Verify

```
mvn -version
```

You should see Maven **3.9+** and the JDK version it is using.

3. IDE — IntelliJ IDEA (recommended)

We will be using **IntelliJ IDEA** during the demo. The **Community Edition** is free and sufficient.

- Download from: <https://www.jetbrains.com/idea/download/>
 - During installation, accept defaults.
 - On first launch, IntelliJ will detect the JDK and Maven automatically.
- Alternative IDEs:** VS Code (with the *Extension Pack for Java*) or Eclipse will also work.

4. Git (optional but recommended)

If you want to clone the project repository instead of downloading a zip:

OS	Instructions
Windows	Download from https://git-scm.com/download/win
macOS	<code>brew install git</code> or install Xcode Command Line Tools
Linux	<code>sudo apt install git</code>

Verify

```
git --version
```

Quick Checklist

#	Tool	Minimum Version	Check Command
1	JDK	11+	<code>java -version</code>
2	Maven	3.9+	<code>mvn -version</code>
3	IntelliJ IDEA (Community)	Latest	—
4	Git (<i>optional</i>)	Any	<code>git --version</code>

See you there! 🚀
